

TEST 2, WRITING TASK 1

This is an answer written by a candidate who achieved a **Band 5.0** score.

The growth reveals the amount of visitors one caribbean island during 7 years. Also we can see the number of tourist who are staying on cruise ships and on the island. On this period between 2010 and 2015 we can observe a growth, 1 millions in 2010 till 2,7 mll in 2015. In what concerns the peoples who went they vacation on island there is a constant increase 0,75 mln in 2010 and one and half mln in 2015. By contrast with visitors from cruise ships who had (dropped) a nose in, a rise during a year approximately 0,25 mln. During one year (2015-2016) was a constant growth. The 2017 it may be considered a peak of development of tourism in this region 3,5 mln.

However, caribbean island it most populated by tourists, (that w) in seven years was a growth of 2 ml peoples. This use it's observe so in the island and in the water.

Here is the examiner's comment:

This is an attempt to describe the graph, but it is quite difficult to follow. The description of total visitors is dealt with first and is fairly clear (and accurate). Similarly the description of visitors staying on the island is fairly clear and accurate. The description of visitors staying on cruise ships is hard to understand and does not give enough information. Organisation begins well but becomes weaker and, in fact, the script is incomplete. Vocabulary is generally adequate for the task, but there are errors in spelling [*reeals* / reveals | *concers* / concerns | *whent* / went | *visitors* / visitors | *pise* / rise | *contant* / constant] and some word choices cause difficulty for the reader [*min* / million | *a nose in?* | *obseve?*]. There are some attempts at complex sentence structures (relative clauses), but the range is limited. The band score could be improved if spelling and word choice were more accurate and if there was more variety of sentence structures.
