

## TEST 1, WRITING TASK 2

This is an answer written by a candidate who achieved a **Band 5.0** score.

I think that will be happen in the future. Why: Because if you guys can see from now, you guys always distracted by phone and like you guys can not live without phone. So can you guys imagine, what it will be in the future? Yeah, I know phone is so important now like the example you can save the important file, transfer file, transfer the money, even now you can buy something just bring your phone and pay. Your phone can be your wallet now.

All people think this is the easier way, you just bring your phone and boom! you can pay the think that you want to buy. For the example, in Indonesia DANA, OVO, GO PAY is so famous. Many people use them for pay something for online or offline. They just transfer the money and then they can buy something without bring the wallet. And if you guys know, many department store like MATAHARI, HYPERMART and more, they make a business relationship with DANA and OVO. If someone buy something use DANA or OVO, that person will be get discount, big discount. That is how the promotion.

For the second example is, you can pay the driver with that too. How can the driver get their money? That is the question right? All that I know is, every month the department will give them money. And then if there someone who buy it cash, that is their money. My friend was told me, but I already for get how. But as you guys know, the hacker your account can be get hacked, hacker can get in everywhere that we don't know. They can stole your money from your account, and then what happen? Your money will be gone. It's okay if you transfer a little bit money, but if it's more than 1 million? I can not imagine that. So that guys, we cannot believe our phone forever, we still need a wallet for keep our money.

Here is the examiner's comment:

This response includes the 'payments by phone' but does not mention 'payments by card' at all. This means that the question is only partially addressed. The second paragraph is mainly irrelevant to the question and gives examples of how these cashless payments work. This results in the main ideas not being sufficiently developed. There is limited use of cohesive devices [*so* | *but*] and some repetition [*you guys* | *money* | *hacker*], demonstrating an inability to reference.

Vocabulary is minimally adequate for the task and there is a lack of range. Sometimes the wrong words are used [*All people* / *everyone* | *believe* / *trust*]. Grammatical range is limited, for example, the overuse of [*can*]. There are also frequent errors [*without bring* | *that will be happen* / *that will happen*]. There are some attempts to use more complex structures [*if someone buy something* | *That is how*] but they are not accurate.

To improve the Band Score for this response, the candidate would need to address all parts of the question, and include a wider range of vocabulary and more accurate grammatical structures.
